Psychosurgery, or the surgical treatment of mental disorders, has enjoyed a spectacular revival over the past ten years as new brain stimulation techniques have become available. Neuromodulation offers new possibilities for the treatment of psychiatric disorders such as depression, obsessive-compulsive disorder (OCD), addiction, eating disorders and autism. This work presents the history of this unique specialty and investigates current techniques and ethical challenges. With a wealth of illustrations and detailed anatomical diagrams, it provides essential information for medical practitioners, as well as anyone else interested in the fascinating advances being made in neuroscience today. « I like the book as it provides a very nice overview of psycho- surgery in general. It is easy to understand for any (para)medical practitioner, but even specialists in the field may learn new things. They may also enjoy looking the well-known and less-known figures which illustrate the book. » Professor Bart Nuttin « Reading this book is like reading an anthology, or rather an encyclopaedia of the field of psychiatric surgery, spanning more than a century. This is a work with an unprecedented degree of erudition and knowledge, and the subject is presented in a didactic, scholar, and scientific manner, and is extensively referenced and illustrated. If only one book is to be read by anybody interested in this field, regardless of specialty, this is The Book to read. » Professor Marwan Hariz The Encyclopedia of Psychology and Law addresses the interface of psychology and law and draws from the related discipline of criminal justice. This text is appropriate for students needing an introductory understanding of philosophy and how a theory is constructed as well as students and nurses who understand theory at an advanced level. The Second Edition discusses the AACN DNP essentials which is critical for DNP students as well as PhD students who need a better understanding of the DNP-educated nurse's role. *Philosophies and Theories for Advanced Nursing Practice, Second Edition* covers a wide variety of theories in addition to nursing theories. Coverage of non-nursing related theory is beneficial to nurses because of the growing national emphasis on collaborative, interdisciplinary patient care. The text includes diagrams, tables, and discussion questions to help students understand and reinforce core content. The MacCAT-CR provides a structured format for capacity assessment that is adaptable to the particulars of any given research project. With the introduction of the MacCAT-CR, researchers enrolling human participants in their studies have available for the first time a reliable and valid means of assessing their potential subject's capacity to consent to participation. The MacCAT-CR can typically be administered in 15-20 minutes. Beginning with project-specific disclosures to potential participants, the MacCAT-CR measures the four generally accepted components of decision-making competence: understanding, appreciation, reasoning, and the ability to express a choice. Quantification of subjects' responses permits comparisons across subjects and subject groups, and allows the MacCAT-CR to be used for not only for screening individual participants but also for conducting research on the characteristics of subject populations and for assessing the effectiveness of interventions designed to increase subjects' capacities. In December 2016, the CCA was asked by then Minister of Health Jane Philpott and Minister of Justice and Attorney General of Canada Jody Wilson-Raybould to undertake independent reviews related to medical assistance in dying (MAID). Specifically, the CCA was tasked with examining three particularly complex types of requests for MAID that were identified for further review and study in the legislation passed by Parliament in 2016: requests by mature minors, advance requests, and requests where a mental disorder is the sole underlying medical condition. On December 12, 2018 the CCA released the three final reports of the Expert Panel, one on each type of request: *The State of Knowledge on Medical Assistance in Dying for Mature Minors*; *The State of Knowledge on Advance Requests for Medical Assistance in Dying*; and *The State of Knowledge on Medical Assistance in Dying Where a Mental Disorder is the Sole Underlying Medical Condition*. Electroconvulsive therapy (ECT) is a psychiatric treatment involving the induction of a seizure through the transmission of electricity in the brain.

Because of exploitation movies and greatly heightened drug company promotional activities ECT was used less frequently in the 1980s and 1990s. Eventually these movies were understood as unrealistic. Now these drugs are increasingly recognized as dangers to body health. Because of recent refinements and a far better scientific understanding of the clinical procedures and mechanisms underpinning ECT, this treatment modality has seen a resurgence in use and widespread appreciation of its safety. This book is the new definitive reference on electroconvulsive and neuromodulation therapies. It comprehensively covers the scientific basis and clinical practice of ECT as well as comparisons between ECT and medication therapies including the new generation of antipsychotic drugs. It also provides readers with administrative perspectives and specific details for the management of this modality in clinical practice. The new forms of nonconvulsive electrical and magnetic brain stimulation therapy are also covered in detail, in a separate section. The chapter authors are leading scholars and clinicians. The MacArthur Competence Assessment Tool for Treatment (MacCAT-T) is the product of an 8-year study of patients' capacities to make treatment decisions. It is a semi-structured interview that assists clinicians in assessing a patient's competence to consent to treatment. The process provides a patient with information about their medical/psychiatric condition, the type of treatment being recommended, its risks and benefits, as well as other possible treatments and their probable consequences. During this process, the MacCAT-T prompts the clinician to ask questions that assess the patient's understanding, appreciation, and reasoning regarding treatment decisions.The MacCAT-T Manual is a large-format, examiner-friendly field manual for conducting actual competency assessments. The MacCAT-T Record Form is well designed for recording, rating, and summarizing patient responses. The training videotape, Administering the MacCAT-T, demonstrates an actual administration of the test with discussion, comments, and annotations by Drs. Grisso and Appelbaum.The book, Assessing Competence to Consent to Treatment, describes the place of competence in the doctrine of informed consent, analyzes the elements of decision making, and shows how assessments of competence to consent to treatment can be conducted within varied general medical and psychiatric treatment settings. Includes numerous case studies. Neurodegenerative diseases are the most frequent cause of dementia, representing a burden for public health systems (especially in middle and middle-high income countries). Although most research on this issue is concentrated in first-world centers, growing efforts in South America are affording important breakthroughs. This emerging agenda poses new challenges for the region but also new opportunities for the field. This book aims to integrate the community of experts across the globe and the region, and to establish new challenges and developments for future investigation. We present research focused on neurodegenerative research in South America. We introduce studies assessing the interplay among genetic, neural, and behavioral dimensions of these diseases, as well as articles on vulnerability factors, comparisons of findings from various countries, and works promoting multicenter and collaborative networking. More generally, our book covers a broad scope of human-research approaches (behavioral assessment, neuroimaging, electromagnetic techniques, brain connectivity, peripheral measures), animal methodologies (genetics, epigenetics, proteomics, metabolomics, other molecular biology tools), species (all human and non-human animals, sporadic, and genetic versions), and article types (original research, review, and opinion papers). Through this wide-ranging proposal, we hope to introduce a fresh approach to the challenges and opportunities of research on neurodegeneration in South America. Major developments in the field since the publication of Learning Forensic Assessment are integrated in this revised edition, including revised editions of the DSM-5, HCR-20 scale, and child custody guidelines. This textbook is designed for graduate students learning forensic assessment and psychologists coming to forensic practice later in their careers. It is organized around five broad areas: Professional and Practice Issues, Adult Forensic Assessment, Juvenile Forensic Assessment, Civil Forensic Assessment, and Communicating Your Findings. Each chapter begins with a strong teaching and learning foundation. The latter part of each chapter is assessment specific, covering available assessment measures and approaches to assessment. The authors go well beyond simple descriptions of assessment measures and provide a conceptual discussion of the evaluation process that helps the reader understand how assessment measures fit into the overall evaluation process. The evaluation component is geared toward assessing the important aspects of the construct as laid out in the early part of each chapter. Each chapter then concludes with a case example to illustrate the measures and techniques described. This Encyclopedia goes beyond other references in the field to offer concise and comprehensive coverage of assessment, treatment and rehabilitation in a single source, with more than fifteen hundred entries with linked cross-references and suggested readings. This handbook is the definitive resource for understanding current mental health policy controversies, options, and implementation strategies. It offers a thorough review of major issues in mental health policy to inform the policy-making process, presenting the pros and cons of controversial, significant issues through close analyses of data. Some of the topics covered are the effectiveness of various biomedical and psychosocial interventions, the role of mental illness in violence, and the effectiveness of coercive strategies. The handbook presents cases for conditions in which specialized mental health services are needed and those in which it might be better to deliver mental health treatment in mainstream health and social services settings. It also examines the balance between federal, state, and local authority, and the financing models for delivery of efficient and effective mental health services. It is aimed for an audience of policy-makers, researchers, and informed citizens that can contribute to future policy deliberations. Forensic psychology has mushroomed into a diverse and increasingly complex field that is equal parts law and psychology. Psychologists act as expert witnesses in legal cases - sometimes without knowing much about the laws involved, and legal professionals rely on the assessment of psychologists sometimes without knowing much about how such assessments are made. The purpose of this handbook is to provide professionals with current, practical, and empirically based information to guide their work in forensic settings, or to better their understanding of the issues and debates in forensic psychology. Divided into four sections, the Handbook of Forensic Psychology covers basic issues, assessment, mental disorders and forensic psychology, and special topics. The basic issue chapters present a primer on law for the psychologist, a primer on psychology for attorneys, an overview of ethical issues relevant to forensic psychology, and a chapter on forensic report writing. The assessment section discusses factors and measures relevant for assessing a variety of behaviors, propensities, and capabilities, including dangerousness, violence, suicide, competency, substance abuse, PTSD and neuropsychological evaluations, as well as discussing interviewing children and child custody evaluations. Additional chapters discuss eyewitness testimony, recovered memory, polygraphs, sexual harassment, juror selection, and issues of ethnicity in forensic psychology. NOMINATED FOR THE MANFRED S. GUTTMACHER AWARD BY THE AMERICAN PSYCHIATRIC ASSOCIATION Although advances in clinical/forensic theory and technology continue to elucidate our understanding of deception analysis, the current state of the art is crude in most applications. Coverage of quantitative, qualitative, and other research methodologies provides a solid foundation to conduct, appraise, and apply research evidence to the realities of today's clinical practice. Balanced coverage of qualitative and quantitative methods addresses the qualitative research methodologies that are often the starting point of research projects, particularly in magnet hospitals and DNP programs. Clear, comprehensive coverage is organized into five units that include: an introduction to nursing research; coverage of the research process; application for evidence-based health care; how to analyze data, determine outcomes, and disseminate research; and how to propose and seek funding for research. Strong emphasis on evidence-based practice addresses this key graduate-level QSEN competency and reinforces how to generate research evidence and appraise and synthesize existing research for application to clinical practice. Rich examples from nursing literature bring research principles to life. Emphasis on the most currently used research methodologies focuses on the methods used in both quantitative research and qualitative research, as well as outcomes research and mixed-methods research. Coverage of digital data collection examines the use of online research tools. Quick-reference summaries include a table of research methods inside the front cover and a list of types of research syntheses (with definitions) inside the back cover. The volume demystifies the forensic psychological assessment process and provides guidelines for participating effectively and ethically in legal proceedings. Presented are clinical and legal concepts and evidence-based assessment procedures pertaining to criminal and civil competencies, the insanity defense and related doctrines, sentencing, civil commitment, personal injury claims, antidiscrimination laws, child custody, juvenile justice, and other justice-related areas. Case examples, exercises, and a glossary facilitate learning; 19 sample reports illustrate how to conduct and write up thorough, legally admissible evaluations. New to This Edition *Extensively revised to reflect important legal, empirical, and clinical developments. *Increased attention to medical and neuroscientific research. *New protocols relevant to competence, risk assessment, child custody, and mental injury evaluations. *Updates on insanity, sentencing, civil commitment, the Americans with Disabilities Act, Social Security, juvenile and family law, and the admissibility of expert testimony. *Material on immigration law (including a sample report) and international law. *New and revised sample reports. Major Depressive Disorder (MDD) is one of the most prevalent psychiatric disorders, with a lifetime prevalence rate of roughly 20%. MDD is a leading cause of disability and premature death worldwide, leads to greater impairment in work functioning than other chronic medical conditions, and has an estimated annual cost of \$210 billion in the US. The proposed text is designed for mental health professionals and will present state-of-the-art treatment options that are used in the Depression Clinical and Research Program (DCRP) at the Massachusetts General Hospital. The text provides different treatment options so that providers can 'think outside the box' of conventional interventions. The introductory sections discuss general themes about diagnosing and treating depression. The major body of the book, however, consists of chapters organized under the topics of new medication, new psychotherapy, alternative treatments, and consideration of specific populations and how to modify interventions to best treat these patients. Each chapter begins with a case vignette to illustrate key characteristics of the disorder process or treatment and reviews the history, research support, and new advances of these topics. In addition, the chapters include a description of how to apply this topic in treatment and frequently asked questions and answers. This book will be a unique contribution to the field. Existing guides focus on individual treatments of Depression, or include brief descriptions of interventions as a whole. The DCRP has consistently been a forerunner of clinical treatments for depression and often treats challenging cases of this disorder. This book will provide a practical and useful resource with wide applicability. "This second edition is a restatement of the theory, a review of what happened to the field since the theory was first introduced 15 years ago, and its application to a new generation of forensic assessment instruments that has evolved in that time." --p. x.
