Advanced Programming in the UNIX Environment Jan 22 2020 The new third edition of *Advanced Programming in the UNIX(R) Environment* supports today's leading platforms, reflects new technical advances and best practices, and aligns with Version 4 of the Single UNIX Specification. This valuable tool begins with files, directories, and processes, carefully laying the groundwork for more advanced techniques, such as signal handling and terminal I/O then thoroughly covers threads and multithreaded programming, and socket-based IPC. This edition covers more than seventy new interfaces, including POSIX

asynchronous I/O, spin locks, barriers, and POSIX semaphores. Students are given examples, including more than ten thousand lines of downloadable, ISO C source code. More than four hundred system calls and functions are demonstrated with concise, complete programs that clearly illustrate their usage, arguments, and return values. To tie together what they've learned, the book presents several chapter-length case studies, each reflecting contemporary environments. *Solaris 9 Operating Environment Reference* Jan 02 2021 "When you need fast, detailed answers about the Solaris Operating Environment, the manual pages aren't enough: you need *Solaris 9 Operating Environment Reference*. Award-winning technical writer Janice Winsor delivers over 1,600 pages of rock-solid information on 550+ commands, including over 100 new commands for IP networking, remote access, compression, printing, NIS, NFS, and more. Winsor also provides tested examples and clear, easy-to-understand explanations for the new LDAP-related commands, NCA (Network Cache Accelerator), PERL, RBAC (Role-Based Access Control), SSH, and Kerberos security commands. You'll find thorough descriptions, practical usage examples, and detailed reference tables - all organized for maximum accessibility and quick problem solving."--BOOK JACKET.
