Each book in the series is designed to guide

the student through the study of anatomical structures. The books do this through the use of clearly marked photographs and illustrations. Accompanying text offers the student both easy-to-follow dissection instructions and factual information about the section under observation. At the end of each chapter there are tests which can be used for self-study or for grade course evaluation. Within the traditional dissection portion of a biology course, many programs include the sheep heart, eye, and brain. Within many of these guides, the author has incorporated photographs of these structures to more closely follow standard course curriculum. The author also provides important information on human organs such as the eye, ear, and heart. In this way, the student can better understand the role and function of these organs as they relate to human life processes. Add to this each book's large-size format, lay-flat spiral binding, and reasonable cost, and you can see why the Bohensky Dissection Series has become one of the most successful dissection guides used throughout this country's schools. This practical guide facilitates a thorough dissection of the dog to learn basic mammalian structure and specific canine features. Emphasizing anatomical knowledge, each chapter presents self-contained guidance on the dissection of a specific body part, allowing the reader to perform these dissections in any sequence preferred. Descriptions are based on the dissection of embalmed, arterially injected adult dogs of mixed breeds, and the anatomical terms used in the book come from the *Nomina Anatomica Veterinaria*. Content is organized by specific body part to give readers the ability to work in any sequence. An introductory chapter explains commonly used terms in anatomy in great detail. It also discusses the moral implications of dissecting dogs for canine gross anatomy, as well as the procedures and guidelines used in dissection. A list of figures and tables with page numbers is included in the front of the book. A list of references is provided in the back of the book to provide opportunities for further study. New CAT scans are provided to show internal anatomical features that can only be seen by this method. More than 300 illustrations - including new and updated drawings - depict each dissection procedure, step-by-step. Updated content includes recommendations from individuals in the global veterinary community. Excerpt from *Outlines of Anatomy: A Guide to the Methodical, Study of the Human Body, in the Dissecting Room* If the whole period Of dissection

is more than twenty-eight days, the additional time can well be applied by taking two days, for each of the assignments up to and including the fourteenth, thus making forty-two days in all for the dissecting of a part with as many hours per day as is deemed advisable.
