Language acquisition is a human endeavor par excellence. As children, all human beings learn to understand and speak at least one language: their mother tongue. It is a process that seems to take place without any obvious effort. Second language learning, particularly among adults, causes more difficulty. The purpose of this series is to compile a collection of high-quality monographs on language acquisition. The series serves the needs of everyone who wants to know more about the problem of language acquisition in general and/or about language acquisition in specific contexts. Divided into three parts, this resource first expands on the origin and implementation of the Emerging Researcher Program (ERP), complemented by critical reflections of the program's first four years. The second and third parts examine the seminar and supervision training programs that constitute core ERP business. These latter selections are based on material developed for and presented at seminars and workshops. Participants in the ERP will gain insight into many program details and understand it as an adaptable model to address many situations both within South Africa and in the broader African context. All fine artists share a common goal: to combine individual elements into a convincing, cohesive whole that tells a story or expresses an intention. Photography is especially suited to this pursuit because the photographer can create multiple, distinct images of a single subject using a variety of design techniques. The display on a digital camera instantly shows the arrangement of elements in an image, allowing the photographer to make changes and refine their creation as they work. Albrecht Rissler believes that a firm understanding of image design is as important as having an observant eye or having the technical knowledge to operate a camera. Photographic Composition presents the most important concepts of image design and offers 250 beautiful photographs to illustrate these concepts. By applying these concepts to your own work, you will greatly improve your photographic eye and your ability to compose an ideal image. This book's impressive images are in black-and-white, intentionally removing the distraction of color and making it easy to focus on compositional elements and form. With this book, photographers as well as all visual artists will learn how to infuse their own images with excitement, develop and hone their visual language, and express their personal artistic aesthetic. Topics include: The effect of various aspect ratios Perspective and composition Form and contrast Proportion and harmony Symmetry and asymmetry Brightness and darkness Structures and textures The "perfect moment" The common framework for industrial property information and documentation. As both an art form and a universal language, the photograph has an extraordinary ability to connect and communicate with others. But with over one trillion photos taken each year, why do so few of them truly connect? Why do so few of them grab our emotions or our imaginations? It is not because the images lack focus or proper exposure; with advances in technology, the camera does that so well these days. Photographer David duChemin believes the majority of our images fall short because they lack soul. And without soul, the images have no ability to resonate with others. They simply cannot connect with the viewer, or even—if we're being truthful—with ourselves.

In *The Soul of the Camera: The Photographer's Place in Picture-Making*, David explores what it means to make better photographs. Illustrated with a collection of beautiful black-and-white images, the book's essays address topics such as craft, mastery, vision, audience, discipline, story, and authenticity. *The Soul of the Camera* is a personal and deeply pragmatic book that quietly yet forcefully challenges the idea that our cameras, lenses, and settings are anything more than dumb and mute tools. It is the photographer, not the camera, that can and must learn to make better photographs—photographs that convey our vision, connect with others, and, at their core, contain our humanity. *The Soul of the Camera* helps us do that. The Workbook gives students focused reinforcement of what is taught in class. A wide range of exercises recycle and extend vocabulary and language structures. The accompanying Audio CD contains the songs and chants that students learn in class. Clap your hands for Pockets Proven success for your pre-school students. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems. Designed for busy medical students, *The Radiology Handbook* is a quick and easy reference for any practitioner who needs information on ordering or interpreting images. are; and where to find information and resources for continued learning. - Part III is an imaging quiz beginning at the head and ending at the foot. Sixty images are provided to self-test knowledge about normal imaging anatomy and common imaging pathology. Published in collaboration with the Ohio University College of Osteopathic Medicine, The Radiology Handbook is a convenient pocket-sized resource designed for medical students and non radiologists. Minimize your risk by knowing the latest on anesthesiology equipment The present volume focuses on complimenting behavior, including the awarding of (self-)praise, as manifested on social media. These commonplace activities have been found to fulfil a wide range of functions in face-to-face interaction, discursal and relational amongst others. However, even though the giving of compliments and praise has become a pervasive practice in online environments, it remains a largely underexplored field of study within pragmatics. Self-praise is an activity that appears at the present time to be rapidly gaining ground online, and the various functions it performs clearly also need further investigation. The different contributions to this ground-breaking volume – 12 in total – aim to address this gap in research by exploring and shedding light on a number of aspects of these phenomena in a range of languages and language varieties. New socio-digital contexts are examined, supported in some cases by social networking sites not previously studied in complimenting behavior research. These include Facebook, Instagram, Renren, Twitter, as well as web forums, message boards and live text commentary.
