Histology for Pathologists Dec 17 2022 A strong grounding in basic histology is essential for all pathologists. However, there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking. Histology for Pathologists deals with the microscopic features of normal human tissues, from the perspective of the surgical pathologist. This is the only text that uses human (vs. animal) tissues for the histology. It is the best reference in the literature for information on normal histology, and, as such, is essential for all clinical pathologists. Written by pathologists for pathologists, the new edition updates the pathologist's understanding of normal histology up to date with the incremental advances made in the last five years. The 3rd edition has become a "classic" purchased by virtually all residents beginning their pathology training, as well as pathologists in practice. The 4th edition builds on that substantial foundation. The table of contents remains essentially the same with the exception of some changes in authorship.

Cellular Pathology as Based Upon Physiological and Pathological Histology Jul 12 2022 This book is one of the towering classics in the history of the development of modern medicine. In a day when organic cells were believed to be formed chemically from 'blastemas, ' Rudolf Virchow lectured his colleagues at the Institute of Pathology in Berlin on his work proving that new cells were formed mainly by division of the old. His twenty lectures, published in this volume, trace how Virchow developed the importance of the cellular theory in pathology, exposed the falsity of previous theories of tissue component generation, and presented a new understanding of physiological and pathological tissues. His discussions turned the study of histopathology toward new horizons. -- from Back Cover.

Medical Histology Feb 13 2020 It is difficult for a teacher to accept the fact that not all of the information in his or her field is a necessary part of the armamentarium of the student. This holds for histologists, and for that matter, pathologists, biochemists, and ophthalmologists. It may especially hold for those who were trained during exciting periods in the history of their discipline. In the past two decades, information in every basic medical science has increased greatly, perhaps exponentially, and the basic science curriculum has been compressed to the point where the medical student can reasonably be expected to acquire only a superficial knowledge of anyone of these sciences. Hence the information provided must be carefully selected, effectively presented in retainable doses, and useful for understanding material to be presented later in the curriculum and for the solution of clinical problems. In the compact courses of today, the presentation of only enough data to support basic working concepts of structure and function is appropriate. Additional factual information constitutes trivia, which in our opinion interferes with effective development, retention, and use of the concepts. This philosophy has been the basis for the preparation of this book. Consistent with this philosophy, the text is brief, and the content has been carefully examined for its appropriateness to the needs of the medical student.

The Pathology of the Eye, Vol. 1 Mar 28 2021 Excerpt from The Pathology of the Eye, Vol. 1: Histology; Part I No complete monograph on the Pathology of the Eye has yet been written in any language. Various attempts have been made from time to time to describe and illustrate the chief facts of the pathological histology by Wedl (1860), O. Becker (1874), Pagenstecher & Genth (1878), Alt (1880), Wedl & Bock (1886), Greeff (1902), Ginsberg (1903), and others. All of these, with the exception of Ginsberg's Manual and the incomplete work of Greeff, are inadequate and out of date; and even the latter works are not available for all English-speaking ophthalmologists. The object of this treatise is to give as complete an account of the Pathology of the Eye as is possible in the present state of our knowledge. It may be reasonably asserted that the time is not ripe for such a work, and as far as dogmatic finality is concerned this is true There are few, however, who will not admit the urgent need of gathering together the grains of knowledge which we possess, and winnowing them of the chaff of futile conjecture and discredited theory. It must be admitted with regret that few of the problems before us have been solved. I shall therefore endeavour to set forth the facts which have been discovered, and which have been recorded in the various European and American scientific journals. The various theories based upon these facts will be reviewed and weighed, with the object of determining their relative value, and of arriving at the best working hypotheses for directing future research. It is not to be expected that my deductions will meet with unqualified approval. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Pathological Technique Jan 06 2022 Excerpt from Pathological Technique: A Practical Manual for Workers in Pathological Histology The order and method of procedure in making a post mortem examination, including the various incisions, may be said to have been planned for the routine examination of normal or diffusely diseased organs. As soon as a notice able focal lesion is present the order of procedure and the customary method of removal and of incision must be so altered as best to display the lesion. Instruments - The following instruments will be found extremely useful in the autopsy-room, although not all of them are necessary: The autopsy-table should be large, so as to accommodate on it the instruments and several dishes in addition to the body. It should have a slightly raised edge, and should slope gently toward an Opening in the center for the escape of fluids. The table is best made of zinc, and along one edge should have a centimeter scale. The water for use on the table is best supplied by a rubber tube from an overhead pipe reaching to within 60 to 100 cm. Of the table. The scales for weighing the various organs should have a large pan and gram and kilogram weights. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
