Journal of the House of Representatives of the United States Apr 08 2021 Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House".

Toledo Cathedral Nov 27 2022 Medieval Toledo is famous as a center of Arabic learning and as a home to sizable Jewish, Muslim, and Christian communities. Yet its cathedral—one of the largest, richest, and best preserved in all of Europe—is little known outside Spain. In Toledo Cathedral, Tom Nickson provides the first in-depth analysis of the cathedral's art and architecture. Focusing on the early thirteenth to the late fourteenth centuries, he examines over two hundred years of change and consolidation, tracing the growth of the cathedral in the city as well as the evolution of sacred places within the cathedral itself. He goes on to consider this substantial monument in terms of its location in Toledo, Spain's most cosmopolitan city in the medieval period. Nickson also addresses the importance and symbolic significance of Toledo's cathedral to the city and the art and architecture of the medieval Iberian Peninsula, showing how it fits in with broader narratives of change in the arts, culture, and ideology of the late medieval period in Spain and in Mediterranean Europe as a whole.

Visionary Leadership In Healthcare Nov 15 2021 The world is constantly changing, and during a time of great challenges, our healthcare systems must evolve—moving beyond an illness narrative and toward one that focuses on health and healing. In doing so, our leadership styles must evolve as well. Visionary Leadership in Healthcare informs, expands, and empowers nurse leaders to envision and transform the current healthcare system using an evolved worldview to achieve a global, life-sustaining perspective. Authors and skilled, experienced nurse leaders Holly Wei and Sara Horton-Deutsch model their call to move away from hierarchical leadership to more engaged, open, equitable, inclusive, authentic, and caring leadership styles. Table of Contents Chapter 1: The Evolution of Leadership Theories Chapter 2: Global Perspectives on the Evolution of Nursing Leadership Chapter 3: Transcending Leadership and Redefining Success Chapter 4: Developing Effective Nursing Leadership Skills and Capacity Chapter 5: Nurturing Healthy and Healing Work Environments Chapter 6: Leadership Roles in Promoting a Resilient Workforce Chapter 7: Leadership Roles in Mitigating Organizational Trauma Chapter 8: Nursing Leadership in Planetary and Environmental Health Chapter 9: Quantum Caring Leadership: A new Ontology into Practice Chapter 10: Caring Science Informed Leadership Chapter 11: Promoting Exceptional Patient Experience Through Compassionate Connected Care Chapter 12: Applying Complexity Science in Promoting Community and Population Health Chapter 13: Assembling a Unifying Force: Interprofessional Collaboration to Improve Healthcare Chapter 14: Leadership in Disaster Preparedness and Response Chapter 15: Nursing Leadership in the Global Health Context Chapter 16: Nursing Leadership in Promoting the Use of Evidence Chapter 17: Wisdom Leadership: A Developmental Journey Chapter 18: Diversity, Equity, and Inclusion in Nursing Education and Health Systems Chapter 19: Transforming Health Policy Chapter 20: Nursing Leadership in Social and Political Determinants of Health Chapter 21: Creating a Connected World: A Call to Ethics of Face and Belonging

Casey and Callie Cupcake Oct 02 2020 Casey and Callie Cupcake is a Frosted Fable About Being Fantastic... Just The Way You Are! Casey and Callie find themselves freshly baked inside Cake in a Cup, a gourmet Cupcake Shop and winner of Food Network's Cupcake Wars. Realizing that they're both plain chocolate cupcakes, they decide to be better than each other--- by jumping into all sorts of different cupcake toppings and frostings! With the help of wise old Crusty the Carrot Cupcake, the youngsters learn a very important lesson of being proud of who you are on the inside!

Safety and Reliability – Safe Societies in a Changing World Dec 28 2022 Safety and Reliability – Safe Societies in a Changing World collects the papers presented at the 28th European Safety and Reliability Conference, ESREL 2018 in Trondheim, Norway, June 17-21, 2018. The contributions cover a wide range of methodologies and application areas for safety and reliability that contribute to safe societies in a changing world. These methodologies and applications include: - foundations of risk and reliability assessment and management - mathematical methods in reliability and safety - risk assessment - risk management - system reliability - uncertainty analysis - digitalization and big data - prognostics and system health management - occupational safety - accident and incident modeling - maintenance modeling and applications - simulation for safety and reliability analysis - dynamic risk and barrier management - organizational factors and safety culture - human factors and human reliability -

resilience engineering - structural reliability - natural hazards - security - economic analysis in risk management Safety and Reliability – Safe Societies in a Changing World will be invaluable to academics and professionals working in a wide range of industrial and governmental sectors: offshore oil and gas, nuclear engineering, aeronautics and aerospace, marine transport and engineering, railways, road transport, automotive engineering, civil engineering, critical infrastructures, electrical and electronic engineering, energy production and distribution, environmental engineering, information technology and telecommunications, insurance and finance, manufacturing, marine transport, mechanical engineering, security and protection, and policy making.

Proceedings From ACCM19: Cell Cycle, DNA Damage Response and Telomeres Apr 20 2022 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

Ubiquitin Proteasome System Feb 24 2020 The human ubiquitin proteasome system (UPS) is comprised of nearly 1000 proteins. Although originally identified as a mechanism of protein destruction, the UPS has numerous additional functions and mediates central signaling events in myriad processes involved in both cellular and organismal health and homeostasis. Numerous pathways within the UPS are implicated in disease, ranging from cancer to neurodegenerative diseases such as Parkinson's. The goal of this book is to deliver a collection of synopses of current areas of UPS research that highlights the importance of understanding the biology of the UPS to identify disease-relevant pathways, and the need to elucidate the molecular machinations within the UPS to develop methods for therapeutic modulation of these pathways.

High Tech Concrete: Where Technology and Engineering Meet Nov 03 2020 This book contains the proceedings of the fib Symposium “High Tech Concrete: Where Technology and Engineering Meet”, that was held in Maastricht, The Netherlands, in June 2017. This annual symposium was organised by the Dutch Concrete Association and the Belgian Concrete Association. Topics addressed include: materials technology, modelling, testing and design, special loadings, safety, reliability and codes, existing concrete structures, durability and life time, sustainability, innovative building concepts, challenging projects and historic concrete, amongst others. The fib (International Federation for Structural Concrete) is a not-for-profit association committed to advancing the technical, economic, aesthetic and environmental performance of concrete structures worldwide.

The Palgrave Handbook of Ageing and Physical Activity Promotion Oct 22 2019 The ageing of our population is a key societal issue across the globe. Although people are living longer, they need to be living longer in good health to continue to enjoy quality of life and independence and to prevent rises in health and social care costs. This timely and ground-breaking volume will provide an up-to-date overview of the factors that promote physical activity in later life. Despite advances in the fields of gerontology and geriatrics, sports and exercise science, sociology, health psychology, and public health, knowledge is largely contained within disciplines as reflected in the current provision of academic texts on this subject. To truly address the present and substantial societal challenges of population ageing, a multidisciplinary and collaborative approach is required. This handbook will inform researchers, students, and practitioners on the current evidence base for what physical activities need to be promoted among older people and how they can be implemented to maximise engagement. This handbook will be an invaluable resource for researchers, practitioners, policy makers, and students across the social sciences.

Targeting the DNA Damage Response for Anti-Cancer Therapy Feb 18 2022 Over the past decade a complex role for DNA damage response (DDR) in tumorigenesis has emerged. A proficient DDR has been shown to be a primary cause for cellular resistance to the very many DNA damaging drugs, and IR, that are widely used as standard-of-care across multiple cancer types. It has also been shown that defects in this network, predominantly within the ATM mediated signaling pathway, are commonly observed in cancers and may be a primary event during tumorigenesis. Such defects may promote a genomically unstable environment, facilitating the persistence of mutations, any of which may provide a growth or survival advantage to the developing tumor. In addition, these somatic defects provide opportunities to exploit a reliance on remaining repair pathways for survival, a process which has been termed synthetic lethality. As a result of all these observations there has been a great interest in targeting the DDR to provide anti-cancer agents that may have benefit as monotherapy in cancers with high background DNA damage levels or as a means to increase the efficacy of DNA damaging drugs and IR. In this book we will review a series of important topics that are of great interest to a broad range of academic, industrial and clinical researchers, including the basic science of the DDR, its role in tumorigenesis and in dictating response to DNA damaging drugs and IR. Additionally, we will focus on the several proteins that have been targeted in attempts to provide drug candidates, each of which appear to have quite distinct profiles and could represent very different opportunities to provide patient benefit.

Ubiquitin and Ubiquitin-Relative SUMO in DNA Damage Response Sep 25 2022 DNA damage response (DDR) is a term that includes a variety of highly sophisticated mechanisms that cells have evolved in safeguarding the genome from the deleterious consequences of DNA damage. It is estimated that every single cell receives tens of thousands of DNA lesions per day. Failure of DDR to properly respond to DNA damage leads to stem cell dysfunction, accelerated ageing, various degenerative diseases or cancer. The sole function of DDR is to recognize diverse DNA lesions, signal their presence, activate cell cycle arrest and finally recruit specific DNA repair proteins to fix the DNA damage and thus prevent genomic instability. DDR is composed of hundreds of spatiotemporally regulated and interconnected proteins, which are able to promptly respond to various DNA lesions. So it is not surprising that mutations in genes encoding various DDR proteins cause embryonic lethality, malignancies, neurodegenerative diseases and premature ageing. The importance of DDR for cell survival and genome stability is unquestionable, but how the sophisticated network of hundreds of different DDR proteins is spatiotemporally coordinated is far from being understood. In the last ten years ubiquitin (ubiquitination) and the ubiquitin-relative SUMO (sumoylation) have emerged as essential posttranslational modifications that regulate DDR. Beside a plethora of ubiquitin and sumo E1-activating enzymes, E2-conjugating enzymes, E3-ligases and ubiquitin/sumo proteases involved in ubiquitination and sumoylation, the complexity of ubiquitin and sumo systems is additionally increased by the fact that both ubiquitin and sumo can form a variety of different chains on substrates which govern the substrate fate, such as its interaction with other proteins, changing its enzymatic activity or promoting substrate degradation. The importance of ubiquitin/SUMO systems in the orchestration of DDR is best illustrated in patients with mutations in E3-ubiquitin ligases BRCA1 or RNF168. BRCA1 is essential for proper function of DDR and its mutations lead to triple-negative breast and ovarian cancers. RNF168 is an E3 ubiquitin ligase, which creates the ubiquitin docking platform for recruitment of different DNA damage signalling and repair proteins at sites of DNA lesion, and its mutations cause RIDDLE syndrome characterized by radiosensitivity, immunodeficiency and learning disability. In addition, recently discovered the ubiquitin receptor protein SPRTN is part of the DNA replication machinery and its mutations cause early-onset hepatocellular carcinoma and premature ageing in humans. Despite more than 700 different enzymes directly involved in ubiquitination and sumoylation processes only few of them are known to play a role in DDR. Therefore, we feel that the role of ubiquitin and the ubiquitin-related SUMO in DDR is far from being understood, and that this is the emerging field that will hugely expand in the next decade due to the rapid development of a new generation of technologies, which will allow us a more robust and precise analyses of human genome, transcriptome and proteome. In this Research Topic we provide a comprehensive overview of our

current understanding of ubiquitin and SUMO pathways in all aspects of DDR, from DNA replication to different DNA repair pathways, and demonstrate how alterations in these pathways cause genomic instability that is linked to degenerative diseases, cancer and pathological ageing.

Nutrition and Integrative Medicine Mar 19 2022 While medical professionals continue to practice traditional allopathic medicine, the public has turned toward nutritional and integrative medical therapies, especially for addressing the proliferation of chronic diseases. Written by leaders in the academic and scientific world, *Nutrition and Integrative Medicine: A Primer for Clinicians* presents various modalities to help restore health. This book provides users with a guide to evaluating and recommending nutritional and integrative therapies. The book offers insights on the microbiome of the human body, examines the relationship of human health to the microbiome of the food we ingest, and introduces the concept of "food as information." It provides enlightenment on anti-aging and healing modalities, mind-body medicine, and an investigation of psychological trauma as related to disease causation. Integrative therapies, including water, light, and sound therapy, are explored, and information on healing chronic disease through nutrition, the tooth-body connection, the role of toxins in disease causation, and electromagnetic field hypersensitivity, as well as its management, is presented.

Advanced High Strength Natural Fibre Composites in Construction Jan 17 2022 *Advanced High Strength Natural Fibre Composites in Construction* provides the basic framework and knowledge required for the efficient and sustainable use of natural fiber composites as a structural and building material, along with information on the ongoing efforts to improve the efficiency of use and competitiveness of these composites. Areas of particular interest include understanding the nature and behavior of raw materials and their functional contributions to the advanced architectures of high strength composites (Part 1), discussing both traditional and novel manufacturing technologies for various advanced natural fiber construction materials (Part 2), examining the parameters and performance of the composites (Part 3), and finally commenting on the associated codes, standards, and sustainable development of advanced high strength natural fiber composites for construction. This exposition will be based on well understood environmental science as it applies to construction (Part 4). The book is aimed at academics, research scholars, and engineers, and will serve as a most valuable text or reference book that challenges undergraduate and postgraduate students to think beyond standard practices when designing and creating novel construction materials. Presents the first comprehensive review on the efficient and sustainable use of natural fiber composites in construction and building materials. Contains detailed information on the structure, chemical composition, and physical and mechanical properties of natural fibers. Covers both traditional and novel manufacturing technologies for high strength natural fiber composites. Includes material parameters and performance in use, as well as associated codes, standards, and applied case studies. Presents contributions from leading international experts in the field.

DNA Replication Controls: Volume 2 Dec 24 2019 This book is a printed edition of the Special Issue "DNA Replication Controls" that was published in *Genes*

International Review of Cell and Molecular Biology Feb 06 2021 *International Review of Cell and Molecular Biology* presents comprehensive reviews and current advances in cell and molecular biology. The series has a worldwide readership, maintaining a high standard by publishing invited articles on important and timely topics authored by prominent cell and molecular biologists. Provides comprehensive reviews and current advances. Presents a wide range of perspectives on specific subjects. Contains valuable reference material for advanced undergraduates, graduate students, and professional scientists.

Neuroplasticity Jul 31 2020 *Neuroplasticity: From Bench to Bedside*, Volume 184 in the *Handbook of Clinical Neurology* series, provides a comprehensive multidisciplinary guide to neuroplasticity. Sections summarize the basic mechanisms of neuroplasticity, focus on neuroplasticity in movement disorders, discuss brain oscillations in neurological disorders, segue into plasticity in neurorehabilitation, and cover issues of inflammation and autoimmunity in neuroplasticity. The book concludes with a section on neuroplasticity and psychiatric disorders. Covers basic mechanisms and clinical treatment approaches in neurological disorders. Includes inflammation, autoimmunity, genetics, neurophysiology, and more. Encompasses stroke, Alzheimer's, movement and psychiatric disorders. Provides tools for enhancing recovery.

Sensors for Gait, Posture, and Health Monitoring Volume 1 Sep 13 2021 In recent years, many technologies for gait and posture assessments have emerged. Wearable sensors, active and passive in-house monitors, and many combinations thereof all promise to provide accurate measures of physical activity, gait, and posture parameters. Motivated by market projections for wearable technologies and driven by recent technological innovations in wearable sensors (MEMs, electronic textiles, wireless communications, etc.), wearable health/performance research is growing rapidly and has the potential to transform future healthcare from disease treatment to disease prevention. The objective of this Special Issue is to address and disseminate the latest gait, posture, and activity monitoring systems as well as various mathematical models/methods that characterize mobility functions. This Special Issue focuses on wearable monitoring systems and physical sensors, and its mathematical models can be utilized in varied environments under varied conditions to monitor health and performance.

Systems Modeling: Approaches and Applications - Volume II Sep 01 2020

Great Lakes Seaway Review May 29 2020

The Memory Work of Jewish Spain Jun 22 2022 The 2015 law granting Spanish nationality to the descendants of Jews expelled in 1492 is the latest example of a widespread phenomenon in contemporary Spain, the "re-discovery" of its Jewish heritage. In *The Memory Work of Jewish Spain*, Daniela Flesler and Adrián Pérez Melgosa examine the implications of reclaiming this memory through the analysis of a comprehensive range of emerging cultural practices, political initiatives and institutions in the context of the long history of Spain's ambivalence towards its Jewish past. Through oral interviews, analyses of museums, newly reconfigured "Jewish quarters," excavated Jewish sites, popular festivals, tourist brochures, literature and art, *The Memory Work of Jewish Spain* explores what happens when these initiatives are implemented at the local level in cities and towns throughout Spain, and how they affect Spain's present.

Multicriteria and Optimization Models for Risk, Reliability, and Maintenance Decision Analysis Mar 02 2023 This book considers a broad range of areas from decision making methods applied in the contexts of Risk, Reliability and Maintenance (RRM). Intended primarily as an update of the 2015 book *Multicriteria and Multiobjective Models for Risk, Reliability and Maintenance Decision Analysis*, this edited work provides an integration of applied probability and decision making. Within applied probability, it primarily includes decision analysis and reliability theory, amongst other topics closely related to risk analysis and maintenance. In decision making, it includes multicriteria decision making/aiding (MCDM/A) methods and optimization models. Within MCDM, in addition to decision analysis, some of the topics related to

mathematical programming areas are considered, such as multiobjective linear programming, multiobjective nonlinear programming, game theory and negotiations, and multiobjective optimization. Methods related to these topics have been applied to the context of RRM. In MCDA, several other methods are considered, such as outranking methods, rough sets and constructive approaches. The book addresses an innovative treatment of decision making in RRM, improving the integration of fundamental concepts from both areas of RRM and decision making. This is accomplished by presenting current research developments in decision making on RRM. Some pitfalls of decision models on practical applications on RRM are discussed and new approaches for overcoming those drawbacks are presented.

Otologic Trauma, Pathology, and Therapy Nov 22 2019

A Framework for Durability Design with Strain-Hardening Cement-Based Composites (SHCC) Jan 05 2021 This book captures the state of the art of the durability of fibre-reinforced strain-hardening cement-based composites (SHCC) and the durability of structures or structural elements manufactured in full or in part with this class of modern construction materials. Highlights include: - Reflection on durability performance of existing applications in patch repair, a water reservoir and highway bridges. - Guidelines for tensile testing towards durability assessment of cracked SHCC. - New crack pattern related ingress rate indices for water and chloride into cracked SHCC. - The influence of low and high temperatures on SHCC durability performance. - The mechanism of crack control reducing ASR and corrosion rate, and results on chloride-induced corrosion of embedded steel reinforcement. - Self-healing of cracks in SHCC. - A conceptual durability design framework for SHCC and R/SHCC structures and members.
