As we enter the final phase of our long accidental experiment with representative democracy it is worth understanding why its failure was a consequence of fundamental systemic flaws, so that we can attempt to avoid such obvious pitfalls when at some time in the future the survivors of all the populist-nationalist horrors to come will be looking around for better approaches to self-governance. We live in a global inter-connected world and we are a primate group species with hardwired cognitive biases. These two basic realities clash, and today we are seeing the beginnings of our descent back into discord and strife in consequence of our failure to understand and accept our hardwired limitations. The only way our descendants can hope to escape a similar fate is by building systems of governance that account for the fact we are for the most part irrational, ignorant, and biased. This book looks at why representative democracy began, why it failed, and why we now have the freedom to consider alternative options that may serve us much better. The book then goes on to outline some potential future directions. Lex Fullarton takes a closer look at the three pillars of the sustainable development framework known as the Triple Bottom Line (TBL). The concept of the TBL is that for a project to be sustainable it must not simply be profitable in economic terms, but it must also benefit society and enhance the natural environment. In the 21st century, the greatest threat to Earth's natural environment and the population of the planet is the rise of greenhouse gas emissions caused from burning fossil fuel as an energy source. The rise of GHG emissions has resulted in a rise in the ambient air temperature of the Earth's atmosphere and is resulting in a significant change in climatic conditions on Earth. Fullarton scrutinizes the problem of getting industry and governments to understand the significance of creating harmony within the TBL. One of the main problems is that partisan politics tends to fragment the factors of the TBL rather than bring them together. Fullarton takes a strong stand in suggesting that taxation systems, which have traditionally been viewed primarily as a means of raising government finance, can be effectively applied to influence industrial and consumer attitudes towards transiting away from polluting fossil-fuel energy sources towards non-polluting renewable energy use.
